

WE KNOW WATER — *and how to protect it.*

Inframark's Cybersecurity Essentials Program is designed specifically for water utilities by our water infrastructure experts

Decades of hands-on experience operating and maintaining, and engineering solutions for water and wastewater utilities nationwide, has enabled our team to develop a holistic cybersecurity program. Our approach relies on a proactive, preventative protocol to combat emerging threats targeting water systems. Tailored specifically for water utilities, Inframark's **Cybersecurity Essentials Program** provides practical must-have protections and best practices to secure your systems, safeguard your communities, and keep your operations running smoothly.

Inframark's Cybersecurity Essentials delivers:

-  **> Streamlined** approach with minimal operational disruption
- > Cost-effective** solution that works for systems large and small
-  **> Alignment** with national industry and federal regulations
- > Threat awareness** that quickly addresses vulnerabilities and safeguards operations
-  **> Partnership** that's backed by certified security professionals who understand your infrastructure

OUR COMPREHENSIVE CYBERSECURITY CAPABILITIES INCLUDE:

Industry Best Practice Assessments • Vulnerability Updates • Training • Network Protection • Threat Intelligence • SCADA/OT Backup & Resilience • Physical Access Controls • Video Surveillance
